B. AMENDMENTS TO THE CLAIMS

- 1. (Withdrawn) A method of producing megakaryocytes in vitro comprising coculturing human mesenchymal stem cells with CD34+ cells to induce the CD34+ cells to differentiate into megakaryocytes.
- 2. (Withdrawn) The method of claim 1 wherein the mesenchymal stem cell population is allogeneic or autologous to the hematopoietic progenitor cell population.
- 3. (Withdrawn) The method of claim 1 wherein the cells are in close physical association in a monolayer.
- 4. (Currently amended) A method for treating a patient in need of megakaryocytes, comprising administering to the patient isolated <u>and purified</u> human mesenchymal stem cells in an amount effective to produce megakaryocytes.
- 5. (Currently amended) A method for treating a patient in need of megakaryocytes comprising administering to the patient isolated <u>and purified</u> human mesenchymal stem cells and CD34+ cells in an amount effective to produce megakaryocytes.
- 6. (Withdrawn) A method of producing genetically modified megakaryocytes, comprising transducing hematopoletic progenitor cells with exogenous genetic material; and culturing the transduced hematopoletic cells in the presence of mesenchymal stem cells to induce differentiation of the transduced hematopoletic cells into megakaryocytes which contain the exogenous genetic material.
- (Withdrawn) A composition of genetically modified megakaryocytes.
- 8. (Withdrawn) A composition of genetically modified platelets.
